Spam Assassin

Return to [Whitelisting](#)

In Spam Assassin, you can whitelist Church Community Builder in the User Preferences. To whitelist,

- Find the **spamassassin** folder from your hard drive, and open it.
- There would be a file named **user_prefs**. Open it with a text editor (for e.g. Notepad). If there is no such file, create it, instructions are available at http://spamassassin.taint.org/doc/Mail_SpamAssassin_Conf.html
- Make a new line in the file. On that line, enter **whitelist_from**, followed by the Church Community Builder address that you wish to whitelist. To whitelist the domain, enter @ccbchurch.com.
- Save and close the file.
